

IN THE DRAWINGS:

A new drawing is submitted to address the objection to claim 22 and the lack of any protrusions shown in the drawings. No new matter is introduced by this amendment since the protrusions on the load bearing surface were originally described. Moreover, showing the protrusions as merely a bump extending from the surface of the load bearing surface does not raise a new matter issue. One of skill in the art would readily understand the meaning of protrusion in claim 22 and illustrating it in the fashion show in Figure 5C is proper. Entry is respectfully requested.
